

AIM Program Compatibility with Win 8.1

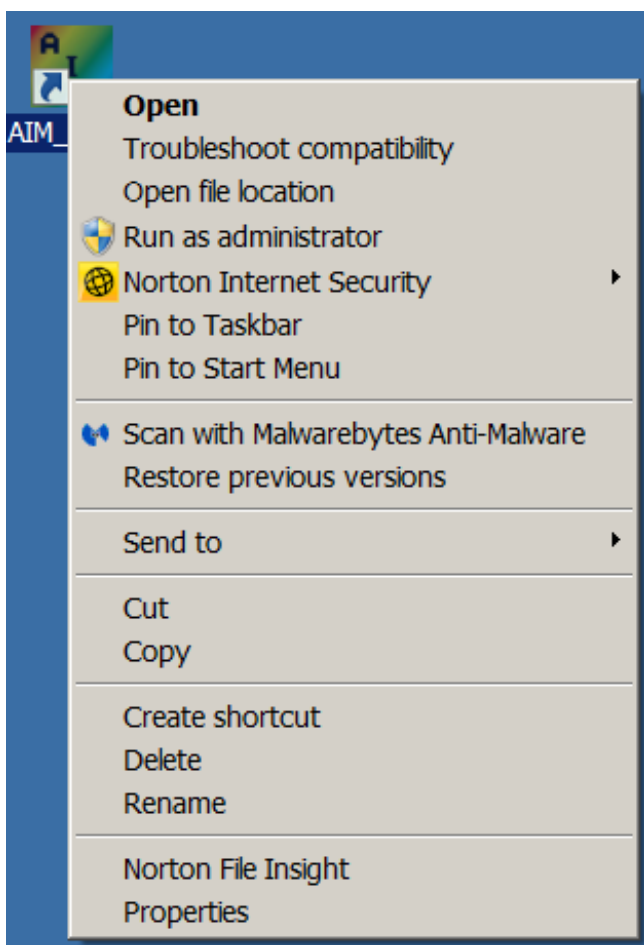

Sept 8, 2014

Some people have reported having a problem running the latest AIM program with Windows 8.1. (Earlier versions of Windows don't seem to cause a problem).

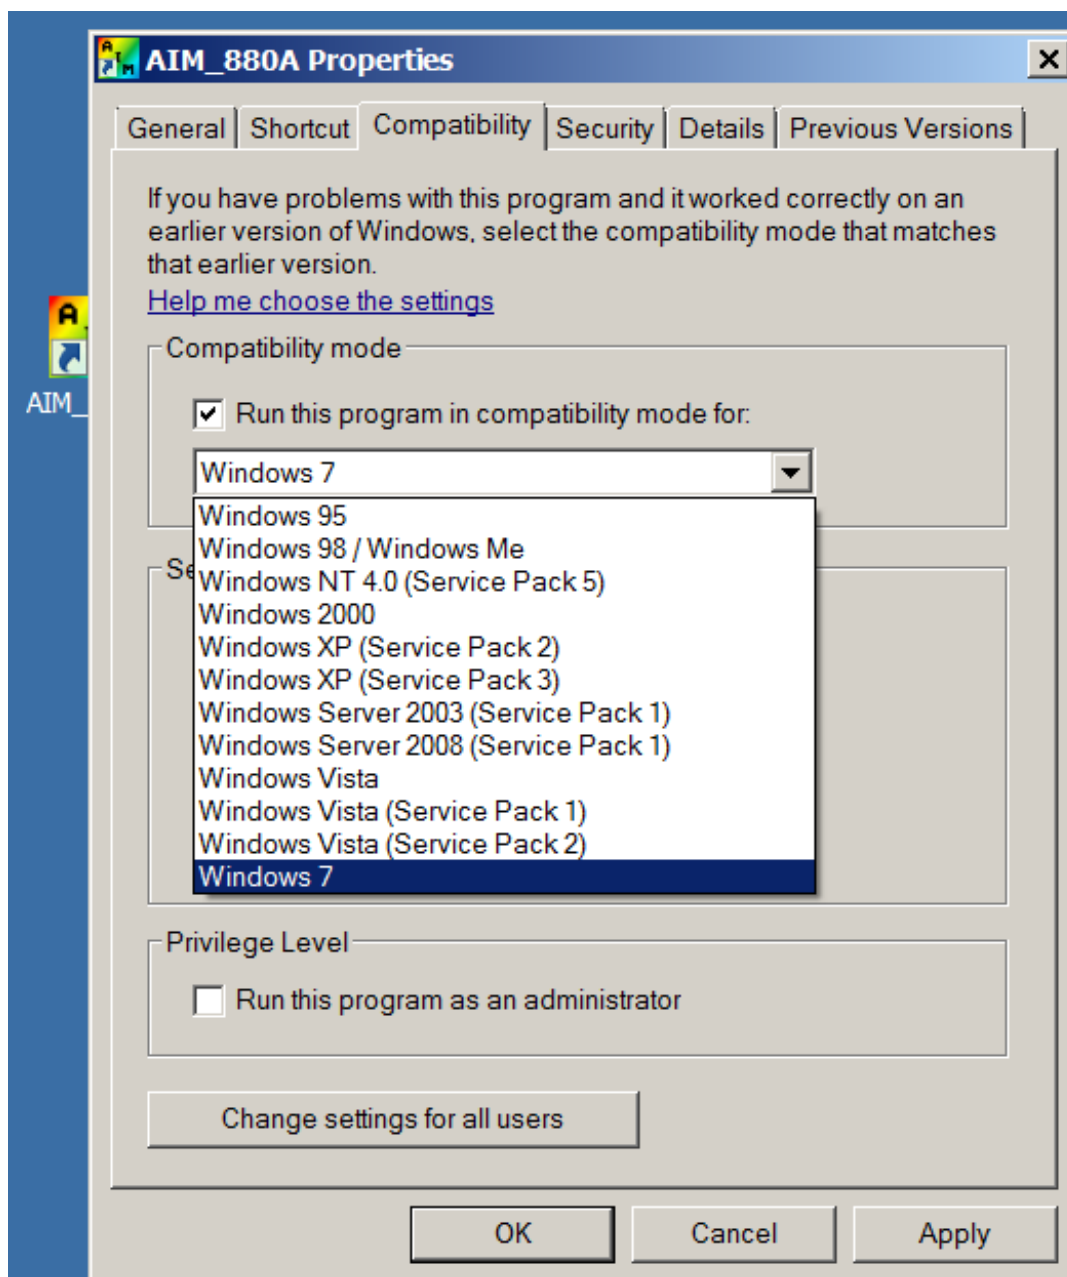

The trick is to tell Windows 8.1 to run the program in a mode that is compatible with an earlier version of Windows. The following pictures show Windows 7, which is what I use but Windows 8.1 is similar.

Here is the program icon on the desktop:

Right click the icon to get this drop down list. Then click "Properties" at the bottom of the list

Click the "**Compatibility**" tab and then check the box that says "Run this program in compatibility mode for:"

Then select Windows 8 or Windows 7 from the drop down list.

Click OK.

This page has more tips for addressing the Win 8 compatibility issues:
